

Every day presents more disturbing evidence that the culture of death has infiltrated healthcare systems internationally, imposing death on vulnerable human beings for utilitarian reasons.

Killing and exploitation at the beginning of life, including:

- Abortion
- Infanticide
- Abortifacient drugs and devices
- Embryonic stem cell research
- Selling the body parts of babies killed by abortion
- In vitro fertilization

End-of-life decisions and abuses of patients, including:

- Death deliberately caused by dehydration/neglect
- Advance directives for healthcare choices that hasten death
- “Terminal sedation” used to impose death
- “Futile care” policies/laws used to deny patients life-sustaining treatment
- POLST* forms/laws used to move patients toward premature death
- Euthanasia by lethal injection
- Physician-assisted suicide
- False declarations of death

The Need for a United Front

Pro-life healthcare providers recognize the sacred duty to protect and preserve the lives of patients entrusted to their care and never to injure or wrong them. Physicians, nurses, pharmacists, and others are outraged by the violations against human life and dignity they see in health care settings. What’s more, pro-life healthcare providers are targets of the culture of death:

- Conscience rights are increasingly violated.
- Careers are threatened.

It is difficult to resist alone.

Pro-life healthcare providers—together with lawyers, social workers, clergy, organizations and others—must present a united front to positively impact the medical culture by modeling reverence for human life, each in our own sphere of influence.

* POLST—Physician’s Orders for Life-Sustaining Treatment—is known by different acronyms in various states (MOST, MOLST, POST, etc.)

Introducing the Pro-life Healthcare Alliance

The Pro-life Healthcare Alliance (PHA), a program of Human Life Alliance, was formed to:

- Establish a support network of healthcare providers and organizations who subscribe to the “pro-life healthcare philosophy” [see PHA Mission Statement].
- Create a hotline referral service of pro-life healthcare professionals, healthcare facilities, and advisors for patients needing pro-life healthcare and persons seeking reliable information about medical decision making.
- Be a forum to courageously oppose imposed death and work together to renew reverence for life within healthcare.
- Create new pro-life healthcare facilities and volunteer opportunities.
- Educate the public by articulating principles guiding the care, support, and protection of the life and dignity of all human beings, including those who are preborn.

Capture the Vision!

By working together—motivating, empowering, and encouraging one another—we can fundamentally transform the medical culture throughout the world. We need you. We invite you to join the Pro-life Healthcare Alliance.
